

Press Release: New Windows Software to Fly Over All Text Files Of A Folder

German startup presents new user interface concept to browse and search text at high speed.

Stuttgart, Germany.

StahlWorks Technologies released **Depeche View**, a Windows tool to browse and search all text files of a folder in realtime. It allows a **quick overview over all ASCII plain text files**, like HTML documentation, configuration files, log files, source code and CSV spreadsheet data.

The program comes with a **new user interface** made for speed: one to three large windows show the content of **all text files as one long text**.

Screenshot: 60.000 files as a 26 miles long text.

- flying over text is possible by dragging the mouse, or by **soft scrolling with the mouse wheel**.
- **words are searched instantly** by typing, or by clicking on them.
- words can be **colored for a quick local overview**.
- all three mouse buttons can be used to search by one click in the current, left or right window. This allows to **jump through thousands of text files in realtime**.

The program is used to **browse all kinds of document-tation, configuration files or log files** available as plain text, to **analyze source code** of software projects and for manual synchronization of **.csv spreadsheet exports**.

Depeche View Lite is **Freeware**, can search 1000 files and runs instantly **without installation**.
